

...making good cars better!

BIG MOUTH® RE-WASHABLE FILTER

Congratulations! You now have a Big Mouth® premium quality air filter. Big Mouth® high performance washable filters have a special filtering element made up of several layers of pure cotton with a particular mixture of oils and resins which guarantee a high filtering power and an air flow well above that of normal paper or sponge filters. This superior performance is guaranteed for long distances even on dusty roads to ensure maximum power from your engine with minimum fuel consumption and therefore considerable savings. The filter is already oiled and ready for use.

MAINTENANCE INSTRUCTIONS

This should be carried out approximately every 10000kms depending on road conditions.

- Gently shake the filter to expel the highest possible quantity of surface dust.
- Spray both sides of the filter with degreaser or wash in warm water with soapy detergent.
- Carefully rinse both sides of the filter under running water or the hose until all the degreaser/detergent is eliminated.
- Leave in the sun to dry completely, or if time does not permit, dry under hot air (such as a hairdryer).
- Filter may be re-oiled by lightly spraying underside with WD40.
- Wipe out airbox before refitting filter.

Big Mouth® high performance washable filters are guaranteed for 10 years, with no limit on mileage. The warranty covers all manufacturing defects provided the filter has been installed correctly and maintenance has been carried out as indicated in the instructions. If a defect is recognised in the product, SS Inductions (on behalf of the manufacturers) will replace the defective filter free of charge and will accept no responsibility for any damage arising. Please keep proof of purchase.
